## **MULTIPLE CHOICE** Write the letter corresponding to the *best* answer in the blank provided.

MUL	TIPLE	<b>HOICE</b> Write the letter corre	esponding to the <u>best</u> an	swer in the blank provi	iaea.			
1.	The student council of McNeil High School wants to conduct a survey regarding the dress code for school dances have advised them that it might be best to conduct a stratified random sample of the student body. Which of the following is <b>not</b> a valid <b>stratified</b> design?							
	A) Two simple random samples are to be conducted: one of the boys in the student body and the other of the girls in the student body.							
	<ul> <li>B) Four simple random samples are conducted: one in each of the four grade levels.</li> <li>C) A census is conducted in each of 5 randomly selected Zone classes.</li> <li>D) Two random samples are conducted: one of students whose GPA's are 2.5 or higher and the other of students whose</li> </ul>							
	GPA's are less than 2.5.  E) All of these statements are valid stratified designs.							
2.	Hoping to get information that would allow them to negotiate new rates with their advertisers, Natural Health magazine phoned a random sample of 600 subscribers. 64% of those polled said they use nutritional supplements. Which is true?							
	<ul> <li>I. The population of interest is the people who read this magazine.</li> <li>II. "64%" is not a statistic; it's the parameter.</li> <li>III. This sampling design should provide the company with a reasonable estimate of the percentage of all subscribers who use supplements.</li> </ul>							
	A) I on	ly B) I and II only	C) I and III only	D) II and III only	E) I, II, and III			
3.	s. Suppose your local school district decides to randomly test high school students for attention deficit disorder (ADD). There are three high schools in the district, each with grades 9 – 12. The school board pools all of the students together randomly samples 250 students. Is this a simple random sample?							
	B) Ye C) Ye D) No	es, because the students were chooses, because each student is equalles, because they could have choses, because we can't guarantee the population, because we can't guarantee the	y likely to be chosen. en any group of 250 studen at there are students from	each school in the sample	<u>.</u>			
4.	Simple ra	andom sampling						
	B) of	duces bias resulting from poorly fsets bias resulting from undercoduces bias resulting from the belone of the above.	overage and nonresponse.					
5.	A chemistry professor at Podunk University (known as PU) who teaches a large lecture class surveys his students who attend his class. He wants to get some ideas about how he can make the class more interesting since he notices about 25% of the class is "absent" on any given day. During one class period, he distributes a survey for his students to complete. This survey method suffers from							
		untary response dercoverage	<ul><li>B) nonresponse bias</li><li>E) None of the these</li></ul>	C) response	bias			
6.	educatio	A local radio show wants to know what people in Austin, Round Rock and the surrounding areas think about public education. They ask listeners to call in to answer the question, "Are public school teachers doing a good job teaching our roung people?" Of the 724 listeners who responded, 38% said they thought public school teachers were doing a good job.						
	a) Nam	e the population of interest:						
	b) Is the	ere a problem with bias in this si	tuation? Explain.					

7.	Gallup Poll was asked to estimate the true percent of American adults who are concerned about access to healthcare. In
	November, 2007, Gallup conducted a survey of 1034 randomly selected American adults and found that 30% of American
	adults at that time felt that access to healthcare was the top healthcare concern.

Is "the true percent of American adults in November, 2007, who were concerned about access to healthcare"...

t?
t?

Gallup found that the 30% felt that access to healthcare was a top concern. Is this number...

a parameter or statistic (circle answer)	What symbol can be used to represent it?	
a parameter of statistic (effect answer)	What of moor can be abea to represent it	

- 8. Administrators at a hospital are concerned about the possibility of drug abuse by people who work there. They decide to check on the extent of the problem by having a random sample of the employees undergo a drug test. Several plans for choosing the sample are proposed. Name the sampling strategy in each.
  - a) There are four employee classifications: doctors, medical staff (nurses, techs, etc), office staff, support staff (custodians, etc). Randomly select 10 from each category.
  - b) Each employee has a 4-digit ID number. Use a random digit table to select 40 numbers.
  - c) At the start of each shift, randomly select a number from 1 to 10, choose that person as they arrive and then test every 10<sup>th</sup> person after that who arrives for work.
  - d) Randomly select a department (like radiology) and test all the people who work in that department doctors, nurses, technicians, clerks, custodians, etc.
- 9. <u>Name and describe the kind of bias</u> that might be present if the administration described in the previous problem decides that instead of subjecting people to random testing, they will just interview employees about possible drug use.
- 10. Listed below are the names of the pharmacists on the hospital staff. Use the random number table below to select three of the pharmacists to be in the sample. Be very clear with your method. Start at the leftmost digit in the first row of the table and move across. Make your procedure clear so that someone can follow what you did. You must do this by marking directly on or above the table. Then list the people chosen.

## (Please write out your response to #11 on separate paper)

11. In response to nutrition concerns raised last year about food served in school cafeterias, the Smallville School District entered into a one-year contract with the Healthy Alternative Meals (HAM) company. Under this contract, the company plans and prepares meals for 2,500 elementary, middle, and high school students, with a focus on good nutrition. The school administration would like to survey the students in the district to estimate the proportion of students who are satisfied with the food under this contract.

Two sampling plans for selecting the students to be surveyed are under consideration by the administration. One plan is to take a simple random sample of students in the district and then survey those students. The other plan is to take a stratified random sample of students in the district and then survey those students.

- a) Describe a simple random sampling procedure that the administrators could use to select 200 students from the 2,500 students in the district.
- b) If a stratified random sampling procedure is used, give one example of an effective variable on which to stratify in this survey. Explain your reasoning.
- c) Describe one statistical advantage of using a stratified random sample over a simple random sample in the context of this study.
